Question **1**

Correct

The name and mileage of certain cars is passed as the input. The format is CARNAME@MILEAGE and the input is as a single line, with each car information separated by a space. The program must print the car with the lowest mileage. (Assume no two cars will have the lowest mileage)

**Input Format:**

The first line contains the CARNAME@MILEAGE separated by a space.

**Output Format:**

The first line contains the name of the car with the lowest mileage.

**Boundary Conditions:**

The length of the input string is between 4 to 10000.

The length of the car name is from 1 to 50.

**Example Input/Output 1:**

Input:

Zantro@16.15 Zity@12.5 Gamry@9.8

Output:

Gamry

**For example:**

Input	Result
Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 #include<string.h>
3 #include<stdlib.h>
4 int main()
5 {
6     char input[10001];
7     fgets(input,sizeof(input),stdin);
8     char*token=strtok(input," ");
9     char carName[51],lowestcar[51];
10    float mileage,lowestMileage=100000.0;
```

```

11 while(token!=NULL)
12 {
13     char*atPos=strchr(token,'@');
14     if(atPos !=NULL)
15     {
16         *atPos='\0';
17         strcpy(carName,token);
18         mileage=atof(atPos+1);
19         if(mileage<lowestMileage)
20         {
21             lowestMileage=mileage;
22             strcpy(lowestcar,carName);
23         }
24     }
25     token=strtok(NULL," ");
26     printf("%s\n",lowestcar);
27     return 0;
28 }
29

```

	Input	Expected	Got	
✓	Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry	Gamry	✓

Passed all tests! ✓

Question **2**

Correct

A certain number of people attended a meeting which was to begin at 10:00 am on a given day. The arrival time in HH:MM format of those who attended the meeting is passed as the input in a single line, with each arrival time by a space. The program must print the count of people who came late (after 10:00 am) to the meeting.

**Input Format:**

The first line contains the arrival time separated by a space.

**Output Format:**

The first line contains the count of late comers.

**Boundary Conditions:**

The length of the input string is between 4 to 10000.

The time HH:MM will be in 24 hour format (HH is hours and MM is minutes).

**Example Input/Output 1:**

Input:

10:00 9:55 10:02 9:45 11:00

Output:

2

Explanation:

The 2 people were those who came at 10:02 and 11:00

**For example:**

Input	Result
10:00 9:55 10:02 9:45 11:00	2

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 #include<string.h>
3 int main()
```

```
4  {
5      char input[10000];
6      fgets(input,sizeof(input),stdin);
7      int latecount=0;
8      char*token=strtok(input, " ");
9      while (token!=NULL)
10     {
11         int hour,minute;
12         if(sscanf(token,"%d:%d",&hour,&minute)==2)
13         {
14             if(hour>10||(hour==10 && minute>0))
15                 latecount++;
16         }
17         token=strtok(NULL, " ");
18     }
19
20
21     printf("%d\n",latecount);
22     return 0;
23 }
24
```

	Input	Expected	Got	
✓	10:00 9:55 10:02 9:45 11:00	2	2	✓

Passed all tests! ✓

Question **3**

Correct

A single line consisting of a set of integers, each separated by space is passed as input to the program. The program must print the sum of all the integers present.

**Input Format:**

The first line contains the integer values (Each separated by a space)

**Output Format:**

The first line contains the sum of all the integers.

**Boundary Conditions:**

The length of the input string is between 3 to 10000

The value of the integer values will be from -99999 to 99999

**Example Input/Output 1:**

Input:

100 -99 98 5

Output:

104

**Example Input/Output 2:**

Input:

100 200 -300 500 -450 -50

Output:

0

**For example:**

Input	Result
100 -99 98 5	104

Input	Result
100 200 -300 500 -450 -50	0

**Answer:** (penalty regime: 0 %)

```

1  #include<stdio.h>
2  #include<string.h>
3  #include<stdlib.h>
4  int main()
5  {
6      char input[10001];
7      fgets(input,sizeof(input),stdin);
8      int sum =0;
9      char*token=strtok(input," ");
10     while (token!=NULL)
11     {
12         sum+=atoi(token);
13         token=strtok(NULL," ");
14     }
15     printf("%d\n",sum);
16     return 0;
17 }
```

	Input	Expected	Got	
✓	100 -99 98 5	104	104	✓
✓	100 200 -300 500 -450 -50	0	0	✓
